

Timoteo Costantini Scala

Software Developer

Florence · +39 348 419 7712 · timoteocostantiniscala@gmail.com
teemoteeo.github.io/timoteo-site · github.com/teemoteeo · linkedin.com/in/timoteocostantiniscala

Software engineering student at 42 Firenze — C, Python and the web. I build interfaces where the design matters as much as the code, and I work with clients from both sides of fashion: as a freelance developer, and as a model for Valentino, Zegna and Prada, among others.

Looking for an internship on a frontend or creative engineering team · Florence · Bologna · Milan

PROJECTS

Client work

HDGR Architecture ↗ [html/css/js](#) · [gsap](#) · [vercel](#) 2026

- Website for an architecture studio: brutalist layout, 3D transforms, scroll-driven motion.
- Every asset self-hosted, so the site loads reliably from mainland China.

Personal portfolio ↗ [vanilla js](#) · [three.js](#) 2026

- Terminal-style site, no framework: boot sequence and interactive project pages built on real execution traces.

42 Firenze — every Common Core project through Milestone 3 · [repo](#) ↗ Nov 2025 – present

call-me-maybe ↗ [python](#) · [qwen3-0.6b](#) · [constrained decoding](#)

- Function calling with a 0.6B model: at every step a DFA masks the tokens that would break the JSON schema, so the output is valid by construction.
- Vocabulary masks precomputed per state; steps with a single legal token skip the forward pass.

codexion ↗ [c](#) · [pthreads](#)

- Multithreaded resource scheduler (dining-philosophers variant) with FIFO and EDF queues per resource.
- Deadlock-free through ordered lock acquisition; clean under ThreadSanitizer.

fly-in ↗ [python](#) · [pydantic](#) · [pytest](#) · [mypy](#)

- Turn-based simulation routing a drone fleet through a weighted, capacity-constrained graph in the fewest turns.
- Weighted Dijkstra and k-distinct-path search written from scratch, no graph libraries.

a-maze-ing ↗ [python](#) · [curses](#)

- Maze generator and solver (DFS, Prim, Kruskal, BFS) with a terminal UI, shipped as a pip module.

SKILLS

Languages	C, Python, JavaScript, HTML/CSS
Concepts	Concurrency and synchronization, algorithms and data structures, OOP and design patterns
Tools	Git, Linux / command line, Vercel, Neovim
LLM	Constrained decoding, local inference (MLX), MCP
Spoken	Italian (native), English (C2), German (basic)

EDUCATION

42 Firenze — Software Engineering, Common Core. Peer-to-peer, project-based curriculum, no teachers. Nov 2025 – present

Università degli Studi di Milano — Computer Science for Digital Communication. Two years of coursework; first worked with generative models (GPT-2) here. 2021 – 2023

OTHER EXPERIENCE

Model — self-employed, VAT registered since 2022 · Valentino, Zegna, Prada, Oakley, Slam Jam · Paris Fashion Week · [models.com](#) ↗ 2022 – present

Commis de salle — Giorgio Armani's Michelin-starred restaurant, Paris (full time) Jan – Oct 2025

Waiter — Tram Tram, Milan (on-call) 2021 – 2024
